PROFILE INFO

An enthusiastic Front End Web developer with over 2 year of experience in enterprise software development. Proficient in utilizing React, JavaScript, CSS and Bootstrap to create engaging and responsive web applications. A self-motivated individual with a strong passion for learning and keeping up with the latest industry trends.

EXPERIENCE

May 2024 - Continue
Unitech Digital Studio. | Lahore
Front End Developer

- Creating responsive and visually appealing user interfaces using HTML, CSS, and JavaScript. This includes implementing web designs, ensuring cross-browser compatibility, and optimizing for performance.
- Working closely with user experience (UX) and user interface (UI) designers to translate design mockups and wireframes into functional and interactive web pages.
- Writing clean, maintainable, and scalable code while optimizing the performance of web applications. This includes conducting code reviews, writing unit tests, and using tools for debugging and performance monitoring.
- Using version control systems like Git to manage and track changes in the codebase. This involves collaborating with other developers and maintaining a clear project history.

Nov 2022- May 2024
Power Information Technology (PITC) | Lahore
Front End Developer

PROJECTS

MEPCO SMART
Power Information Technology (PITC) l Lahore

MEPCO smart is a web application developed in React with back-end API's in .Net and SQL Server. This web app offers smart Meter consumers features: real time monitoring of load, energy profiles, consumption and payment status, outage, energy advisor, bill estimator with 44 tariffs and initiation of customer services (new connection, change of attributes, bill correction, meter reading correction, complaints, meter change request, opt for smart meter), duplicate bill and online payment.

E-OPERATIONS (Smart Services Platform)
Power Information Technology (PITC) l Lahore

e-operations is web portal is developed in React and back-end in .Net with SQL Server. This portal is used by field operations staff in all 10 Discos customer support centers to process consumers' requests: new connection, change of attributes, bill correction, meter reading correction, complaints, meter change request, opt for smart meter etc. This is back office smart service platform to facilitate consumer with Kiosk self-services portal or agent-based services.

EmpowerCare
Unitech Digital Studio l Lahore

As a key developer on this project, I played a crucial role in designing and implementing the Empower Care CRM application. This innovative platform was built to streamline the staffing process, enhance communication, and ensure that healthcare professionals find fulfilling opportunities that lead to happiness and growth in their careers.
The application features several advanced tools, including Dynamic Squad CPR, Dynamic Schedules, and Sign Hero, all integrated to make staffing effortless and efficient. These tools were developed with a focus on user experience and operational efficiency, ensuring that healthcare institutions can operate flawlessly.

Tutor Finder System
Final Year Project

Tutor System Online is Web Application developed in HTML,CSS,JavaScript and backend in DotNet with SQL Server.The project "Tutor System Online" is very helpful for students for hiring tutors online. Those students who are not willing to hire tutors for home can hire for online classes. Students can also register themselves for specific subjects, providing them online tutorials as per need. Students can register themselves by login accounts. This system will also help the tutors for finding their job easily by registering their account. This system will provide an environment for students and teacher to interact with each on the same platform.
