Projects

Mepco Smart
Power Information Technology (PITC) l Lahore

MEPCO smart is a web application developed in React with back-end API's in .Net and SQL Server. This web app offers smart Meter consumers features: real time monitoring of load, energy profiles, consumption and payment status, outage, energy advisor, bill estimator with 44 tariffs and initiation of customer services (new connection, change of attributes, bill correction, meter reading correction, complaints, meter change request, opt for smart meter), duplicate bill and online payment.

e-operations (Smart Services Platform)
Power Information Technology (PITC) l Lahore

e-operations is web portal is developed in React and back-end in .Net with SQL Server. This portal is used by field operations staff in all 10 Discos customer support centers to process consumers' requests: new connection, change of attributes, bill correction, meter reading correction, complaints, meter change request, opt for smart meter etc. This is back office smart service platform to facilitate consumer with Kiosk self-services portal or agent-based services.

Tutor Finder System
Final Year Project

Tutor System Online is Web Application developed in HTML,CSS,JavaScript and backend in DotNet with SQL Server.The project "Tutor System Online" is very helpful for students for hiring tutors online. Those students who are not willing to hire tutors for home can hire for online classes. Students can also register themselves for specific subjects, providing them online tutorials as per need. Students can register themselves by login accounts. This system will also help the tutors for finding their job easily by registering their account. This system will provide an environment for students and teacher to interact with each on the same platform.
